

Make 'n Take Sheet

Discover How Easy It Is To Make Your Own Assistive Technology!

ABLE
Tech

Movie Theater for iPad

Create your own personal movie theater for your iPad, iPhone or tablet.

Materials:

Large Cardboard box
Tape
iPad, iPhone, tablet
Scissors/Box cutter
Ruler

Make-N-Take Price: Possibly Free

Directions:

1. Make sure your box is big enough to fit your child's head and part of their torso, or maybe even their full torso-whatever's most comfortable and accessible.
2. Cut the bottom of the box off completely, and a hole for the rest of the kid's body that doesn't fit under the box. But not too big of a hole, so minimal light gets in.
3. On the top of the box, measure out a rectangle a little bit smaller than the perimeter of the device, so you can set the device on top of the cardboard without it falling through.
4. Use one of the scrap pieces from the bottom, and tape it to the top to keep the device stable.

Helpful Hints: Many places around town that have things shipped to them, might let you have a big cardboard box for free. Or, you can get them from home depot or lowes for around \$5.00.

Oklahoma ABLE Tech, the statewide Assistive Technology Act Program, is funded through the Administration for Community Living of the U.S. Department of Health and Human Services, and maintains coordination and collaboration efforts with partners throughout the State of Oklahoma.
